

Basic Skills Qualification Musculoskeletal Ultrasound - Shoulder

Evaluation Process

Prior to seeking BSQ certification, a resident should be confident in their skills. The "Basic Skills Qualification" is printed and given to the supervising physician, where after, the resident performs the procedure under direct observation of the supervising physician. The competency assessment is completed by the supervising physician with their signature and given back to the resident. The resident then returns the competency assessment to the Academic Coordinator.

Resident: _____

	Competent	Needs Work
Can identify and demonstrate following:		
-bicipital groove & tendon distal to pectoralis major tendon, short and long axis		
-rotator interval		
-subscapularis, short and long axis		
-supraspinatus, short and long axis, including biceps tendon and interface with, and including, infraspinatus		
-medial joint recess, patellofemoral retinaculum & lig		
-lateral joint recess, patellofemoral retinaculum		
-trochlear and femoral condyle cartilage		
-medial collateral lig & proximal/distal attachments including per anserinus nerve		
-AC joint, SASD bursa and dynamic testing for impingement		
-infraspinatus, teres minor, posterior glenoid labrum		
-AC joint, Subacromial and Subdeltoid bursa and dynamic testing for impingement		

Faculty: _____

Date: _____
